

MEZZANINE FLOORS

Warehousing & Distribution

Installing a single or multi-level mezzanine floor greatly expands storage capacity in dedicated storage facilities, providing a highly cost-effective alternative to relocating.

Hi-Level Mezzanines provides multi-tier systems and offers full fire protection, safety barriers and access equipment as required.

Our structural steel mezzanine floors are capable of withstanding substantial loads, supporting shelving, racking, pallet trucks, etc.

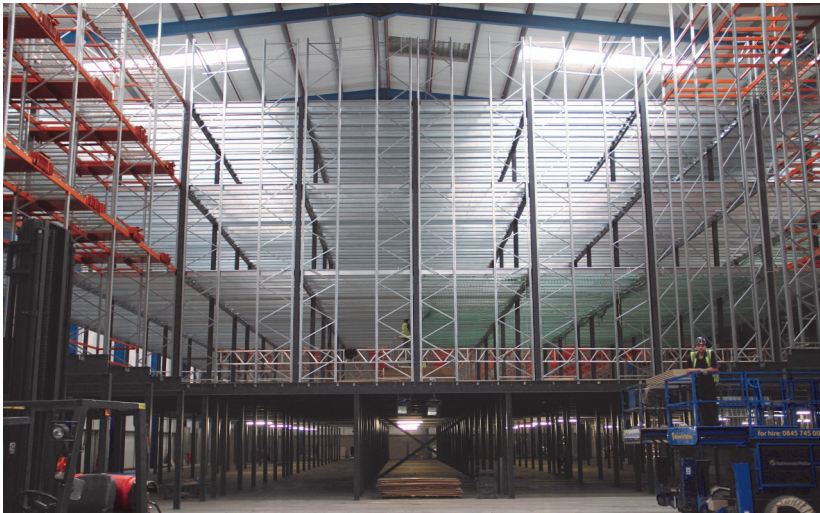

To complement our floors we offer a range of functional handrail, staircase and flooring options, and a selection of pallet gates.

Our value engineering approach, achieved with our proprietary mezzanine floor production system, ensures we are consistently competitive.

Hi-Level's mezzanine floors are installed in some of the largest warehousing and distribution centres in the UK.

Case Studies

Multinational department store

This project entailed the redevelopment of a warehouse to create a new distribution centre for a well-known department store.

The resulting mezzanine floor stands three tiers high and provides an additional 44,000m² floor space to support the retailer's distribution activities.

Multinational retailer

A two-tier mezzanine floor measuring 30m x 90m, capable of taking a load of 4.8 kN/m². It includes four staircases and seven pallet gates, plus a variable column grid.

Cut-outs were incorporated into the mezzanine floor to allow garments to be transported from the ground to the top floor and allowances made for a garment conveyor belt system.

Major logistics company

A two-tier mezzanine floor with the possibility of adding further tiers in the future.

The mezzanine provides an additional 3,440m² of floor area with a loading rating of 5.0kN/m², allowing for storage and light industrial use.

The floor incorporates seven staircases and six pallet gates, together with full safety protection systems.
