

INSTRUCTIONS FOR:
GALVANIZED STEEL SHED GREEN
1.5 x 0.8 x1.5m
 MODEL NO: **GSS150815G**

Thank you for purchasing a Sealey product. Manufactured to a high standard, this product will, if used according to these instructions, and properly maintained, give you years of trouble free performance.

IMPORTANT: PLEASE READ THESE INSTRUCTIONS CAREFULLY. NOTE THE SAFE OPERATIONAL REQUIREMENTS, WARNINGS & CAUTIONS. USE THE PRODUCT CORRECTLY AND WITH CARE FOR THE PURPOSE FOR WHICH IT IS INTENDED. FAILURE TO DO SO MAY CAUSE DAMAGE AND/OR PERSONAL INJURY AND WILL INVALIDATE THE WARRANTY. KEEP THESE INSTRUCTIONS SAFE FOR FUTURE USE.

1. SAFETY INSTRUCTIONS

- WARNING!** Ensure Health & Safety, local authority, and general workshop practice regulations are adhered to when building this shed.
 - ✓ Keep the work area clean, uncluttered and ensure there is adequate lighting.
 - ✓ Keep children and unauthorised persons away from the working area.
 - ✗ **DO NOT** use the shed for any purpose other than that for which it is designed.
 - ✓ Use appropriate safety clothing including eye protection.
- Note!** The assembly of this product will require assistance.

2. INTRODUCTION

Galvanized, steel panels easily assembled to form a rigid and secure shed. Has a flat roof and double doors. All other models have skillion (sloping) roofs and single doors. Doors are secured by cross bolt and eyelet which will accept a padlock (not included) for additional security. All models are supplied with bolt-down fixing kits.

3. SPECIFICATION

Model No: **GSS15081G**
 Overall Size (W x D x H*): 1500 x 800 x 1500mm
 Roof Type: Flat
 *Minimum Wall Height

4. CONCRETE PLINTH SLAB

Concrete Slab: It is recommended that your new shed is secured to a concrete slab as shown below.

Please ensure that your site is level. It is recommended that your slab is 100mm thick, you use a plastic membrane and a suitable reinforcing mesh. We recommend that you make your slab 100mm bigger than the base dimensions of your shed. This will allow for a 50mm edge around your shed. We recommend that you slope the 50mm edges downward by 10mm so that rain water will drain away from your shed.

5. TOOLS REQUIRED

Electric Drill

Cordless Drill

Tape Measure

Phillips Screw Driver

8mm Masonry Bit

Pop Rivet Gun

Rubber Mallet

Step Ladder (2)

Adjustable spanner

3mm Masonry bit

Saw Horse/Trestle

Pencil

Gloves

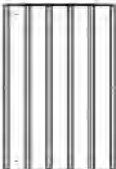

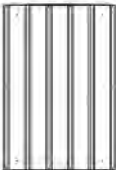

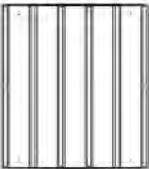

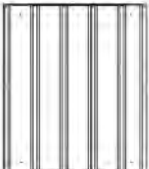

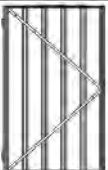

Protective Eyewear

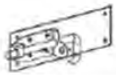

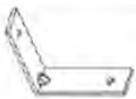

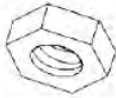

6. CONTENTS

Check contents: Lay out all components with the part numbers facing upwards and check off against the parts lists on the next four pages. In the unlikely event of a missing component please contact you local Sealey dealer.

	Self taper safety cover	25		Channel safety cover (L type)	1
	Channel safety cover (R type)	1		Sleeve anchor bolt	6

7. PARTS DIAGRAM

8. ASSEMBLY

8.1. ASSEMBLE THE REAR WALL PANELS

- 8.1.1. You will find it easier to assemble the shed using trestles, with timber studding of equal or greater panel length. Trestles are available separately from your Sealey Dealer. Attach the studding to trestles with equal overhang using nylon cable ties or similar "safe" method.

- 8.1.2. Place panel 14H and 11G on your work table and join them together with the 10mm long self tapping screws. See the pre-punched holes and diagram below.
- 8.1.3. Fit top and bottom channels 39C and 39D to panels by firstly sliding and finally tapping into place as indicated by arrows in the diagrams. Note that the smaller flange on the channels should always be adjacent to the outside face of the panel; this prevents rainwater entering the compartment of the shed. The outside face is the top face in the diagram below.

8.1.4. An alternative method is to slide channels 39C and 39D as indicated by arrows in diagram above.

8.1.5. Fit item B5 the mid height wall channel to the panel and position it by the pre-punched holes and 10mm long self tapping screws. Note this channel is fitted with the flat face uppermost, ie. nearest the “top”, when the shed is assembled.

8.1.6. With 10mm long self tapping screws fix items 39C and 39D to top and bottom edges.

8.2. ASSEMBLE THE END WALL PANEL.

- 8.2.1. Place panel 14C on your work table.
- 8.2.2. Fit top and bottom channels 21B and 21F to panel by firstly sliding and finally tapping into place as previously similar panel build. Note again that the smaller flange on the channels should always be adjacent to the outside face of the panel. The outside face is the top face in the diagram.
- 8.2.3. Fit item 32E the mid height wall channel to the panel and position it by the pre-punched holes and 10mm long self tapping screws. Note this channel is fitted with the flat face uppermost, ie. nearest the "top" when assembling the shed.
- 8.2.4. With self tapping screws fix item 21B to bottom edge except in position marked with asterisk *, and **do not** screw fix item 21F to top edge at this stage. See those fixings marked with asterisk *.

8.3. ASSEMBLE THE OPPOSITE END WALL PANEL

- 8.3.1. Place panel 14C on your work table.
- 8.3.2. Fit top and bottom channels 21B and 21F to panel by firstly sliding and finally tapping into place as previously similar panel build. Note again that the smaller flange on the channels should always be adjacent to the out side face of the panel. The outside face is the top face in the diagram.
- 8.3.3. Fit item 32E the mid height wall channel to the panel and position it by the pre-punched holes and 10mm long self tapping screws. Note this channel is fitted with the flat face uppermost, ie. nearest the "top" when assembling the shed.
- 8.3.4. With self tapping screws fix item 21B to bottom edge, but do not screw fix item 21F to top edge at this stage. See those fixings marked with asterisk *.

8.4. ASSEMBLE THE ROOF PANEL

- 8.4.1. Place both panels item 3A and 11B on your work table and join them together with the 10mm long self tapping screws. See the pre-punched holes.

- 8.4.2. Fit top and bottom channels item 39A and 39B to panels by firstly sliding and finally tapping into place as previously explained in 8.1.3. Note that the smaller flange on the channels should always be adjacent to the outside face of the panel. The outside face is the top face in both diagrams.

8.4.3. Fit item 50A (angles) to each edge, refer to diagram above for flange orientation. Fix with 10mm long self tapping screws.

8.5. FIT THE SUB ASSEMBLED REAR AND END PANELS TOGETHER.

8.5.1. Attach the end wall 14B to the rear wall 11A & 14A, then the opposite end wall 14C. Fix all walls with the 10mm long self tapping screws.

8.6. INSTALL THE DOOR FRAME

- 8.6.1. Install the front frame items 39E and 39F as per following diagrams. The door mullion sections items 45L and 45R are fixed with 16mm long self tapping screws. Do not fix self tapping screws marked * in enlarged ballooned views until after the door jamb item D3 has been fitted. See 8.6.2.
- 8.6.2. Slide D3 the door jamb into the top channel and fix with 10mm long self tapping screws.

8.6.3. Fit the corner stiffener brackets item 72, fix with 10mm long self tapping screws.

8.7 SUB ASSEMBLE THE DOORS.

8.7.1. Sandwich the stiffener plate item 75 between shoot bolt item 74 and door item 5D and “pop” rivet all three items together. This arrangement is at the top and bottom of the door item 5D.

8.8. INSTALL THE DOOR.

- 8.8.1. Fit the pre assembled door item 5C to the rear panel via the hinges. Fix hinges into pre-punched holes with 4mm diameter rivets. Check action of door before crimping rivets.
- 8.8.2. Fit the shoot bolt item 70 and the bolt keeper item 71 and fix with 10mm long self tapping screws or 4mm diameter rivets. (fitting method A or B)

8.9. INSTALL THE ROOF

- 8.9.1. Self tapping screw fix the pre-assembled roof panel from 8.4; comprising items 39A, 39B and 50A.
- 8.9.2. With the shed located centrally about the plinth slab, position the 6 anchor steel angles (base brackets), M8 machine screw fix to internal compartment. This will require "spotting" and drilling 8mm diameter holes through to shed panels. Spot through holes to plinth slab, remove anchor angles (base brackets) and masonry drill slab for anchor bolts. Anchor bolts and M8 machine screws are supplied, see "FITTINGS PACK".
- 8.9.3. Insert anchor bolts, re-fit steel angles (base brackets) and anchor shed to plinth slab.

8.10. SHED USER SAFETY.

8.10.1. Fit safety covers L to 32E and R to 32E opposite side and any projecting screws to be made safe with self tapper covers.

Environmental Protection

Recycle unwanted materials instead of disposing of them as waste. All tools, accessories and packaging should be sorted, taken to a recycling centre and disposed of in a manner which is compatible with the environment. When the product becomes completely unserviceable and requires disposal, drain off any fluids (if applicable) into approved containers and dispose of the product and the fluids according to local regulations.
